

RIIHAN311E Conduct operations with integrated tool carrier

Understanding when a tool carrier is a better option than a wheel loader.

Adding a tool carrier to your loader is one way to improve your ability to load, unload and move palletised materials, piping and other materials. A tool carrier is a specialised type of wheeled loader that uses a parallel lift linkage system. While a tool carrier and wheeled loader can do most of the same work, a tool carrier does have some distinct advantages for material handling.
